TOM KAISERSKI

Mr. Kaiserski is the Program Manager for the Energy Promotion and Development Division (EPD) in the Montana Department of Commerce. The Division was funded by HB 2 in May of 2007 and EPD is hard at work developing Montana's vast energy resources. EPD's focus at this time is developing electricity transmission projects that can access Montana energy resource areas and move power to load centers in the West.

Prior to taking this new position, Mr. Kaiserski worked as a Senior Economic Development Specialist with Governor Schweitzer's Office of Economic Development where he concentrated on energy development. Mr. Kaiserski has traveled around the region presenting information on energy policy which promotes developing of all of Montana's energy opportunities. This includes emphasis on developing wind, bio-fuels, coal, oil and gas energy sources that eastern Montana has in abundant supply which is one of the keys to national energy independence and revitalizing the economy of eastern Montana.

Mr. Kaiserski grew up in Los Angeles and has a bachelor's degree in earth science from Montana State University in Bozeman. Prior to coming on board with Governor Schweitzer's office in January 2005 he worked for 7 years as the Economic Development Coordinator for the Beartooth RC&D, a regional economic and community development organization that serves a five county region around Billings, Montana. Mr. Kaiserski also worked as a community planner in Montana for over 10 years. Mr. Kaiserski is married to wife Teresa and has four children ranging in ages from 10 to 20.

MINUTES OF THE ANNUAL MEETING OF THE MEMBERSHIP OF SOUTHERN MONTANA ELECTRIC GENERATION AND TRANSMISSION COOPERATIVE, INC.

Pursuant to notice, a meeting of the Membership of Southern Montana Electric Generation and Iransmission Cooperative, Inc., was scheduled and held at Saint Thomas Parisb Center, 2055 Woody Drive, Billings, Montana 59101, on Friday, March 21, 2008. The representatives of the six members were present throughout the meeting. The representatives verter John Prinki (Beartooth Electric); Coleen Balzarini (City of Great Falls); Joe Dirkson (Ferens Fiectric). Bill FitzGerald (Mid-Yellowstone); Gerhard Helm (Tongue River Electric); and Dave Kelsey (Yellowstone Valley Electric).

President Bill FirzGerald called the meeting to order at approximately 9:15 AM, followed by the Phalge of Allegionce. He welcomed the following guests: Brian Altman (Bonneville Power Administration); Robert Harris (Western Arca Power Administration): Denver Schlaeppi (RUS); Linda Lewis (CFC); Sheryl Mayo (PPL); Steve Lehman (Crowley Law Firm); Russell Malson; Jim Reno (Yellowstone County Commissioner); and Rick Matusiak (CPA).

President FitzGerald called on John Prinkle for the invocation. He then designated Mike Mc-Carrer recording secretary for the meeting.

Joe Dirkson, Secretary/Freisurer, reported that representatives of all members were present and that they constituted a quorum. He then read the Notice of the Fifth Annual Meeting of the Members of Southern Montana Electric Generation and Transmission Cooperative, Inc. and the Pool and Certificate of Due Mailing of Notice of Annual Meeting.

John Prinkki moved that the Members dispense with the teading of the minutes of the March 17, 2007, Fourth Annual Meeting, as set torth in the 2008 Annual Report, and approve the minutes of that meeting. Dave Kelsey seconded the motion. The motion carried by unanimous vote.

President FitzLicrald then gave his report regarding the affairs of SME. His report included the following points:

- . At the close of 2007 SMI: had good margins and adequate fund-
- * SME continues to seek an alternative, affordable source of funding for the HGS.
- As SME prepares for the low of BPA power, its rates have increased an average of 5.5% per year since 2004 but rates are still among the lowest in the United Starcs and approximately 46% less than for Northwestern Energy residential customers.
- The HGS project still races challenges but the key to success is to meet those challenges.

President FitzGerald then turned the meeting over to General Manager Tim Gregori.

Manager Gregori thanked President Fitz Gerald and the Board of Trusices for their work the previous year. He reported that despite obstacles in the path of the Highwood Generation Station. SME is on the verge of constructing the first member owned generation facility in Monana, which will provide a clean, reliable source of affordable power for SMFN members. He noted that the project has taken longer than SME would have liked and that the goal of environmentalists is to impede progress. He told the audience that Duane Urquhart is ill but sent a message saying that the Urquhart family continues to support the project.

Manager Gregori then listed the project successes, including the issuance of the Air Quality Permit, a favorable Record of Decision from RUS, issuance of a solid waste disposal factories execution of agreements for raw, potable and waste water agreements between SMF and the city of Great Falls, execution of a Large Generation Integration Agreement with Northwestern Energy, completion and execution of a Project Labor Agreement with Montana unions, execution of a Memorandum of Understanding for operating and spinning reserves, and rezoning of the Salemsite for heavy industrial use.

He then give a power point presentation. Among the points he made during the presentation were the following:

- A disparch curve for March 17, 2008 showed that had the HGS been operational on that date, of could have disparched all its generation up to 895 per megawatt.
- The reason for sizing the HGS to provide peaking power is because the cost of power during peak hours is the most expensive power.
- Justification for constructing the HGS is the same now as in 2003 when it was conceived
- · the HGS will provide significant benefits to the city of Great Falls
- * SMI less been a good environmental stem red.

SME must still secure financing for the HGS and resolve some internal problems but it has
the will to succeed.

Manager Gregori then called on Jeff Chaffee of Bison Engineering for a report on environmental matters.

Mr. Chailee reiterated the milestones covered by Manager Gregori and then discussed specific environmental challenger SME is still facing. He reported that three issues were raised with respect to the Air Quality Permit, one by SME. The SME issue concerns the test method for measuring condensable. He reported that SME is close to setting that issue and that he expects the EPA to approve a new test method. The other two issues were taised by MEIC, which asserts that a BACT analysis should be done for carbon dioxide emissions and a specific BACT analysis should be done for PM2.5. He reported that a two day hearing had been held hefore the Board of Environmental Review in January and that at worst SME will be required to go through more process. He noted that the HGS is a clean project, use latest technology, and compares favorably with the proposed Future Gen facility. He then introduced Nathan Bartow, another Bison environmental engineer, to report on carbon capture. Mr. Chaice noted that SME is as far along in its analysis of carbon capture feasibility and technology as anyone.

Mr. Bartow discussed the two major pieces of carbon capture legislation pending in Congress—Lieberman-Warner and Bingaman-Spector. The former bill proposes a cap and trade system which does not contain a fair allocation for cooperatives. He noted that a speaker at a recent conference he attended predicted its enactment would cost 10,000 to 15,000 jobs in Montana and by 2030 would cost the average family \$5,400. He said the Bingaman-Spector is similar to Lieberman-Warner but with better limits and safeguards. It is receiving more support from industry and labor than Lieberman-Warner.

He went on to report on recent Wyoming legislation and the Montana Governor's Climate Change Advisory Committee. He said that in the previous month Wyoming had concided carbon legislation in gulating pure space for curbon dioxide injection and requiring a carbon analysis for future projects. The Montana Committee has made fifty-four (54) recommendations, fifteen of which are being considered by the Montana Environmental Quality Council for legislation. He said the ones being considered are "low-hanging fruit," i.e., the proposals most easily implemented.

Barrow into round the members that the HGS design will accommodate later addition of culbon-dioxide capture to hinology. He also noted that from a global perspective, the carbon dioxide contributions from HGS will be extremely small. Nonetheless, SME has prepared a draft carbon mitigation plan rargeting a 60% carbon dioxide emissions reduction, 50% through capture and sequestration and 10% through carbon offsets. That would bring the HGS in line with the emissions from a natural gas plant. He said that marketing the expressed carbon dioxide for enhanced oil recovery is essential to contain costs. SME: Carbon Capture and Sequestration Technical Workgroup will be necessing again in 2008 and SME will be submitting an application to the United States Department of Energy for a DOF Clean Energy Coal Initiative ioanigrant.

The meeting was received for a short time. When recalled to order, President FitzGerald called on Manager Gregori to continue. Manager Gregori introduced Kevin Cavanaugh from Stanley Consulting, the project engineering firm.

Mr. Cavanaugh reported on HGS engineering progress. Among the points he made during his presentation were the following:

- . The HCS has been moved off the historical landmark.
- A right-or-way team has been consumed, a manual developed, and alignment sheers prenand
- . Right-of-way eriors will begin to move forward now that zoning has been approved.
- In conjunction with an analysis of arbon capture technology, Stanley engineers visited the Al-S Shadey Point Power Plant in Oldahoma. That plant only captures 3% of carbon dioxide emitted. Power point slides showed that even then the capture equipment sovered a large area of the plant site.

. Stanley supports I rezoning efforts. Its efforts included environmental analysis, a traffic impact study and transc mitigation recommendations for construction, and lighting design to minimize might time light. It also developed a line-of-sight model from the Lewis and Clark Staging Area.

Upon completion of Mr. Cavanaugh's remarks, Manager Gregori reported that both Keith Hausman and Dick McConsish, who were scheduled to speak, were anable to make the meeting.

Manager Gregori then recognized Randy Boysun, 5ME's outside accountant, to report on accounting activities related to the HCS. Randy reported briefly, saving that SMEs financial torecasts had been refreshed for RUS.

Ken Reich then reported on legal activities. He reiterated project milestones already met. He into med the members that the Board of Environmental Review had rejected the Carbon Dioxide BACT challenge but that the PM2.5 challenge is still pending, with a further hearing scheduled for April 21 and 22. He noted that no state in the United States has ever see a limit specifically for PM2.5. He said that if the BER sustains the PM2.5 challenge, then the permit will be remanded back to the Department of Environmental Quality for further analysis.

He reported that the challenge to the RU's record of decision had been dismissed in light of the fact that RUS is not now funding new coal generation facilities. He opined that in light of the dismissal, there is no further need for further consultations regarding the landmark.

Finally, he said that SME can expect more legal challenges since they are a fact of life for projects like the HGS.

Mr. Boysun then presented the financial report. He referred members to the unaudited maneial report in the Annual Report. He directed their attention to the balance sheet and statement of revenues at page. 4 and 5. The balance sheet shows an approximate 35% increase in assets, most of which was due to the HGS. The HGS avestment increased \$7.2 million, 41% attributable to environmental issues, 40% to engineering, and 19% to overhead and other items. He further reported that the CoBank bine of credit was paid in full through a cash call and that as a result SML's equity in the HGS project is now at 75%.

His further reported that:

- . Letters of Credit are now required for power purchases from PPL (\$1.4 million) and from transmission from Northwestern Unergy (5365,000). The PPI letter of credit will have be increased when SME begins receiving additional PPL supply in July 2008.

 The encrow account for the EIS has been closed out and the EIS contractor paid in full.
- · Revenues increased S4.2 million due to increased costs and use.
- Operating costs increased 14%.

Finally, he reported that SME's statements for 2007 are currently being audited by auditor Rick Maru-jak.

Mr. Matusial, reported that during the past couple of years he has been unable to complete the SMF audit in time for the annual meeting due to Northwestern Energy's delays in reporting year end energy imbalances. This year further information is needed with respect to the billing is use with Central Montana Flectric, resolution of which is pending and which will determine what amount will be booked as a receivable. He acknowledged that SME Bylaws require that the audited annual report be presented at the annual meeting but noted that accounting standards preclude his certifying an audit at this time and that he is bound by those standards.

Upon conclusion of the financial report. Gary Helm moved to assert the current trustees, Joe Dirkson seconded the motion. The motion was adopted by unanunous vote.

John Prinkki then moved to ratify all legal actions taken by SME during the prior year. Joe Dirkson seconded the motion and it was adopted without dissenting vote.

Manager Gregori then introduced Roy Palk, former CFO of Fast Kentucky Power Cooperative for the keynore address.

Following the keynote address, Manager Gregori reminded those present that the names of the entities through which SME is seeking financing are confidential.

President FitzGerald noted that the members must still consider the audited financial statements when they become available and that the members should consider amending the bylaws in light of the difficulties experienced with respect to completing the audit by the date presently set for the annual meeting. He said that he was therefore recessing the meeting, eather than adjourning, and that the annual meeting will be reconvened at a later time.

The 2007 Annual Meeting of Southern Montana members was then received until further notice.
